EDUCATION

Seneca Polytechnic

Honours Bachelor of Technology, Software Development (Pursuing CPA Prerequisites)

Toronto, ON

Expected Aug. 2026

- Coursework: Machine Learning (AI for Software Developers) · High Performance Computing · Parallel Algorithms · Computer Vision · Linux/Unix Systems Programming · Operating Systems · Cloud Web Programming

EXPERIENCE

Seneca Polytechnic — INNWIL Lab | VYBE Platform

Software Engineer Intern (Academic WIL)

Toronto, ON

Feb 2026 – Apr 2026

- Built Python (FastAPI) REST services, decoupling heavy extraction from client paths so platform APIs stayed responsive under concurrent internal load.
- Automated GitHub Actions CI/CD with review gates and tests, standardizing how services reached production with fewer release regressions.
- Documented infrastructure tradeoffs in Confluence and worked Agile sprints, explaining reliability decisions to technical and non-technical partners.

Seneca Polytechnic — ITS

ITS Student HyFlex Ambassador + Lab Monitor

Toronto, ON

Aug 2025 – Nov 2025

- Supported 30+ HyFlex hybrid classrooms with front-line troubleshooting across Windows and Linux systems, projectors, and audio setups, resolving issues in person and remotely.
- Installed and configured operating systems and classroom peripherals, keeping daily performance stable across lab spaces for students and faculty.
- Documented HyFlex procedures and trained faculty, reducing repeat support tickets; logged and escalated incidents per ITIL best practices.

Project Human City

Software Engineer (Freelance)

Toronto, ON

May 2025 – Jul 2025

- Integrated third-party REST APIs into production clients, mapping external payloads into stable internal contracts across mobile and web surfaces.
- Developed Kotlin Android and TypeScript React features against shared backends, keeping authentication and error handling consistent across clients.
- Diagnosed and fixed backend defects during release cycles, restoring reliability for community-facing users under real traffic.

Three of Cups

Software Engineer (Freelance)

Toronto, ON

Feb 2024 – Apr 2024

- Designed normalized PostgreSQL schemas and inspected execution plans to remove slow SQL paths on shared request workloads.
- Refactored synchronous backends into asynchronous background jobs, preventing timeouts and enabling safer worker-style scaling under load.

PROJECTS

VertexFlow | [GitHub](#) | *Distributed Workers, Docker, Linux Compute*

2025

- Engineered a 4-service Turborepo platform with a Dockerized Python FastAPI worker on Linux (headless Blender bpy), isolating CPU-heavy jobs from the API request path.
- Implemented Redis-backed BullMQ worker queues with sync fallback and Cloudflare R2 uploads, enabling independent worker scaling for CPU-heavy jobs.

BetterMind | [GitHub](#) | *Machine Learning Inference, PostgreSQL*

2025

- Built Machine Learning inference pipelines via OpenAI APIs — sentiment scoring and pattern detection with confidence scores + JSONB evidence — for downstream serving.
- Designed a 13-table Prisma/PostgreSQL schema with composite UNIQUE constraints, persisting ML outputs as durable contracts for reliable inference workflows.

TECHNICAL & ANALYTICAL SKILLS

Languages: Python, TypeScript, Kotlin, SQL

ML & Infra: Machine Learning, Docker, Linux/Unix, Redis, BullMQ, GitHub Actions

Frameworks: FastAPI, Fastify, tRPC, Next.js, React, OpenAI API, Prisma

Cloud & Data: PostgreSQL, Distributed Systems, ML Inference, REST APIs, CI/CD
